

### **Bill Nye The Science Guy Energy - YouTube**

Energy Skate Park Basics. This simulation shows how kinetic and potential energy are related, in a scenario similar to the roller coaster. Observe the changes in KE and PE by clicking on the bar graph boxes. Also try the three differently shaped skate parks. Drag the skater to the track to start the animation.

By calculating energy expenditure over and above sedentary levels (removing basal metabolic rate), park zones will show only levels of active energy expenditure. For example, zones with large numbers of users will show high levels of energy expenditure, even if all use is sedentary, because any activity (such as standing or sitting) expends energy.

Ice skating is the self-propulsion and gliding of a person across an ice surface, using metal-bladed ice skates. People skate for various reasons, including recreation (fun), exercise, competitive sports, and commuting. Ice skating may be performed on naturally frozen bodies of water, such as ponds, lakes, canals, and rivers; and on man-made ice surfaces such as ice rinks, ice hockey rinks, and ...
