brain and neck. This page from Great Ormond Street Hospital (GOSH) explains about the cerebral angiography procedure and what to expect when your child comes to GOSH to have one.

~~Cerebral angiography | Great Ormond Street Hospital~~

A cerebral angiogram may be performed: to evaluate arteries of the head and neck before surgery. to provide additional information on abnormalities seen on MRI or CT of the head, such as the blood supply to a tumor. to prepare for other medical treatment, such as in the surgical removal of a tumor. ...

~~Cerebral Angiography (Brain Angiogram)~~

Cerebral angiography is also known as intra-arterial digital subtraction angiography (IADSA). In cerebral angiography, a catheter (long, thin, flexible tube) is inserted into an artery in the arm or leg. Using the catheter, a technician injects a special dye into the blood vessels that lead to the brain. In cerebral angiography, X-ray images show blood vessel abnormalities in the brain.

~~Cerebral Angiography & Procedure - Cleveland Clinic~~

Cerebral angiography is an invasive test that involves the injection of contrast media into the carotid artery by means of a catheter. Radiographs are taken as the dye works its way through the cerebral circulation.

Cerebral angiography Angiography is a type of x-ray test used to produce pictures of blood vessels. These pictures are known as angiograms. A cerebral angiogram shows the blood vessels in your head and neck.

~~Cerebral angiography — patient information~~

How the Test is Performed You lie on an x-ray table. Your head is held still using a strap, tape, or sandbags, so you DO NOT move it during the procedure. Before the test starts, you are given a mild sedative to help you relax. An electrocardiogram (ECG) monitors your heart activity during the test. ...

~~Cerebral angiography: MedlinePlus Medical Encyclopedia~~

Cerebral angiography is a type of X-ray test. It uses a special dye and camera to help doctors create pictures of the blood flow in the brain. The test enables doctors to see a map of the blood vessels in the brain and neck. It also helps to show how blood flows between the different parts of the circulation.

CT angiography of the cerebral arteries (also known as a CTA carotids or an arch to vertex angiogram) is a noninvasive technique allows visualization of the internal and external carotid arteries and vertebral arteries and can include just the intracranial compartment or also extend down to the arch of the aorta.

~~CT angiography of the cerebral arteries (technique ...~~

Cerebral angiography is a procedure that doctors use to image blood vessels in the brain. This allows your physician to determine whether the vessels are diseased, narrowed, enlarged or blocked altogether. This procedure can help diagnose blockages, aneurysms and other abnormalities of the blood vessels.
