Leading up to such a test the condition may be suspected based on symptoms shared by other types of heart failure.

There are two phases

Diastolic

diastolic phase blood filling of the ventricles occur and during the systolic phase blood is squeezed out into the circulation. The significance of a normal left ventricular diastolic relaxation is that a sufficient amount of blood needed to supply the rest of the body with each heart beat fills

letter in "diastole" is pronounced as a long "e" as in "lee.") The diastolic pressure is specifically the minimum arterial pressure during relaxation and dilatation of the ventricles of the heart when the ventricles fill with blood.

After the ventricles have finished contracting, they relax, and during this relaxation they fill up with blood to prepare for the next systole.

This relaxation phase of the cardiac cycle is called diastole .

Sometimes, as a result of various medical conditions, the ventricles begin to

An Overview of

Diastolic Dysfunction and Heart Failure

Relaxation is every bit
as important for your
heart as it is for the

rest of you. If for

heart has trouble

completely. Less blood pumped with each contraction sets the stage for a type of heart failure that goes by many names: diastolic heart failure, heart failure with normal ejection fraction, heart failure with preserved systolic function, and others.

Diastolic heart failure

- Harvard Health

Diastole is the part of the cardiac cycle

during which the heart refills with blood after the emptying done during systole.

Ventricular diastole is the period during which the two ventricles are relaxing from the contortions/wringing

of contraction, then dilating and filling; atrial diastole is the period during which the two atria likewise are relaxing under suction, dilating, and filling. The term diastole originates from the Greek word ??????????, meaning dilation.

When your heart isn't able to relax fast enough, it's called diastolic dysfunction (DD). DD is dangerous and is believed to be associated with congestive heart failure symptoms in patients who have what's called preserved left ventricular ejection
