Dichotomous Key Answer Key

Dichotomous Key Definition. A dichotomous key is a tool created by scientists to help scientists and laypeople identify objects and organisms. Typically, a dichotomous key for identifying a particular type of object consists of a specific series of questions. When one question is answered, the key directs the user as to what question to ask next. Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.

A dichotomous key is a tool used to identify all the different kinds of organisms within the six kingdoms of living organisms. It is a branching key in which there are two or more choices in each branch. The last choice in the key will identify what the scientist is trying to determine. A dichotomous key can be used to identify animals, plants, and other organisms and objects. Dichotomous keys work best when they

Dichotomous Key Practice 7 Grade Science Unit 9

Introduction: Dichotomous keys are written for small, specific groups of organisms. For example, each dichotomous key in this Gizmo is used to identify six to eight related species found within a geographic region. Goal: Identify a variety of organisms using dichotomous keys. Practice: Use the Gizmo 's dichotomous key to identify all the buttercups.
