~~Native seeds can be sown thickly (planted close together). Label with the name and sowing date. A good rule of thumb is to sow the seeds to the depth of the thickness of the seed and roughly 1/8 to 1/4 inch apart. Seeds that are fine and dust-like are barely covered (if at all, see germination codes below).~~

~~Creating a native garden with seasonal interest, from spring through winter, requires careful planning and placement of long-lasting bloomers and a variety of foliage plants. For additional interest, include a focal point of some kind. If you are fortunate enough to live in an area surrounded by woods, then a woodland garden will look right at home. When creating natural gardens, try not to overlook the plant's leaves when choosing native garden plants.~~

~~Plant your penstemons in full sun. They are best planted in the spring, rather than the fall. When you plant them in the spring, the plants have the entire growing season to grow out their roots. These are drought tolerant plants, so they have a deep root system. If you plant them in the fall, they have only a short period to grow out their roots.~~

~~How to Grow Penstemon (Beardtongue), a Native Plant ...~~

~~Most native plants prefer well-drained soil, but not all soils work efficiently. Australia has two soil types, clay and sandy. Both are low in fertility and organic matter, which makes the use of the right fertiliser especially important. Australian soils are slightly acidic with a pH of between 5.5 and 7.0.~~
