Answer; What are the characteristics of the moon? M. Klose,  
Content Writer

Answered: Aug 22, 2018. The moon is a celestial body that orbits planet earth, and it is the only permanent natural satellite. The moon is silvery white, round, bright, and mysterious.

# Read Free Moon Phases

and Answers (Q&A) -

ProProfs ...

The portion of the moon that we can see from Earth on any given night is called the moon's phase. As the moon orbits around the Earth, sunlight is reflected off the moon's surface and that light reaches us on Earth. The phase of the moon depends on where the moon is in its orbit.

# Read Free Moon Phases

It takes about one month for the moon to make a full orbit around the Earth, meaning the phases of the moon repeat about once a month!
