Is Preventive Medicine Actually Overtreatment? : NPR

Overdiagnosis occurs when people without symptoms, either by falling on the wrong side of a test threshold (e.g. blood sugar, cholesterol, bone density score) or undergoing screening, are diagnosed with a condition that either would not have caused a problem, would have caused a problem later but did not benefit from early diagnosis, or receive a 'false-positive' diagnosis (leading to anxiety, further tests and treatment with no potential benefit but with potential harm).

Overdiagnosed Making People Sick In Pursuit Of Health

Overdiagnosis is the diagnosis of "disease" that will never cause symptoms or death during a patient's ordinarily expected lifetime. Overdiagnosis is a side effect of screening for early forms of disease. Although screening saves lives in some cases, in others it may turn people into patients unnecessarily and may lead to treatments that do no good and perhaps do harm. Given the tremendous variability that is normal in biology, it is inherent that the more one screens, the more incidental findin
