Control of the cell cycle is necessary for a couple of reasons. First, if the cell cycle were not regulated, cells could constantly undergo cell division. While this may be beneficial to certain cells, on the whole constant reproduction without cause would be biologically wasteful. Second, internal regulation of the cell cycle is necessary to signal passage from one phase to the next at appropriate times.

Section 3 - Cell Cycle Regulation and Cell Differentiation Vocabulary: 1. cyclins are proteins that regulate the cell cycle only when they are tightly bound to CDKs. 2. cyclin dependent kinases are protein kinases that, when fully activated, can phosphorylate and thus activate other proteins that advance the cell cycle past a checkpoint 1.
