In our daily life, electrical projects are very useful in many fields and they need more power when compared with other projects. The circuits of these projects designed with passive components like resistors, capacitors, inductors, and many more. But many diplomae and engineering students don't know the idea about how they work and which projects may come under this category.

McCabe proposed the cyclomatic number, V (G) of graph theory as an indicator of software complexity. The cyclomatic number is equal to the number of linearly independent paths through a program in its graphs representation. For a program control graph G, cyclomatic number, V (G), is given as: V (G) = E - N + 2 * P . E = The number of edges in ...
