water use is water associated with livestock watering, feedlots, dairy operations, and other on-farm needs. Livestock includes dairy cows and heifers, beef cattle and calves, sheep and lambs, goats, hogs and pigs, horses, and poultry. Other livestock water uses include cooling of facilities for the animals and products, dairy sanitation

and wash down of facilities, animal  
waste-disposal systems, and incidental  
water losses.

### **Livestock Water Use - USGS**

It has been shown in multiple research projects, that like humans, livestock growth and health are tied to the quality of water that they drink. Better quality

Download File PDF Livestock  
And Water Resources In The  
Nile River Basin Ethiopia Water  
water leads to better health for mature  
animals plus better weight gain on  
young animals. Here are some resources  
to help monitor the water quality for  
livestock:

### **Livestock Water Quality – Water Quality**

Within the agricultural sector, livestock

And Water Resources In The  
Nile River Basin Ethiopia Water  
production is the largest user of land  
and water resources. The sector uses  
most of the world's grasslands and more  
than a third of the world's arable land for  
feed production, as well as the irrigation  
and rainwater used on those lands.

feed and livestock production (Opio et al., 2011). The growth of the world population is increasing the competition between sectors, users and regions. There is an urgent need to improve the understanding of global water supply and demand in livestock production, as well as the resource efficiency.
