A workflow management system (WfMS) is a software system for setting up, performing, and monitoring of a defined sequence of processes and tasks, with the broad goals of increasing productivity, reducing costs, becoming more agile, and improving information exchange within an organization. These systems may be process-centric or data-centric, and they may represent the workflow as graphical maps.

collateral management

About This Guide. Warehouses across the country are facing new and unusual safety challenges — but warehouse safety programs are not keeping up the pace, as indicated by elevated injury and fatality statistics.. To make matters worse, companies struggling to keep up with e-commerce giants often make sweeping changes and expect safety processes to catch up.

The Practical Warehouse Safety Guide | Safety Blog | Safesite

The better workflow, as described above is to merge upstream/master into your copy of the master branch (this makes it now up to date) and then rebasing your feature branch against your master branch. The end result for your feature branch is the same, but with this process, your master branch is also consistent with the upstream repo.
